

LIQUID COATING SYSTEMS:

Liquid coating systems from Therma-Tron-X have a reputation for dependability and reliability. TTX will design the system for the ground up and provide testing, fabrication and installation services that will ensure that the system will provide maximum value for minimal investment. TTX coating systems stress efficiency and consistency from cleaning to curing.

New formulations in liquid paint have low levels of volatile organic compounds and are HAPs-compliant and chrome-free, designed to comply with federal and local environmental mandates making liquid spray paints more environmentally friendly.

Contact a TTX sales engineer to learn more.

BENEFITS:

One of the biggest advantages to having a TTX system is that TTX is able to innovatively create products that are designed to a company's specifications. Spray booths are a function of a finishing system that when designed and fabricated by Therma-Tron-X are of the utmost quality, uniquely efficient, cost effective and tailored for the product.

TTX LIQUID COATING SYSTEMS:

- Liquid Spray Booths
- Sliderail Square Transfer®
- Monorail
- Programmable Hoist
- Power And Free Conveyor
- All Other Conveyor
- Custom Combinations

Liquid spray coatings provide features that are not available in powder coating and electrodeposition coating. Liquid paints can be better tailored to fit some application needs because choice of the exact color, texture and gloss needed for the project are available.

PRACTICAL APPLICATIONS:

Liquid spray coatings can be used on heat sensitive products and as high-gloss topcoats. Durable spray coating will protect parts from corrosion while providing a decorative finish and color. They are effective as a Class A automotive finish and provide a shiny, high-quality appearance.

COST EFFECTIVENESS:

TTX liquid spray coating systems take advantage of recirculated paint booths, substantially reducing energy costs. High efficiency water-wash booths capture the paint particles with more than 99% effectiveness. PLCs, monitoring systems and robotics automate and streamline production, cutting labor expenses.
